Casewise effects calculated from the random slope effect of a multilevel model

help("scplot.sc_hplm")

Level phase B (phaseB)

Note. The dashed line indicates the fixed effect and the errorbars indicate the 95% confidence intervall.

Tau−u values per case

help("scplot.sc_tauu")

Note. The red line indicates the overall tau−u value of the meta analysis and
the errorbars indicate the 95% confidence intervall.
